## Thermal Data

Parameter	Symbol	Steady State	Unit
Thermal Resistance, Junction-to-case	R <sub>θJC</sub>	1.9	°C/W
Thermal Resistance, Junction-to-ambient	R <sub>θJA</sub>	47	

Note:

- \*a. The power dissipation P<sub>D</sub> is based on T<sub>J(MAX)=150°C</sub>, using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.
- \*b. The value of R<sub>θJA</sub> is measured with the device mounted on 1 in<sup>2</sup>FR-4 board with 2 oz. copper, in a still air environment with T<sub>A</sub>=25°C. The power dissipation P<sub>D</sub> is based on R<sub>θJA</sub> and the maximum allowed junction temperature of 150°C. The value in any given application depends on the user's specific board design.
- \*c. Repetitive rating, pulse width limited by junction temperature T<sub>J(MAX)=150°C</sub>. Ratings are based on low frequency and low duty cycles to keep initial T<sub>J</sub>=25°C.
