g.) Taping method

Taping shall be placed in tapes in such manner as to assure that marking of the components is visible as per Fig.1

Note: Crystal resonator belongs to non-directional passive components which doesn't have positive and negative poles. So it won't cause effect on usage even been reversed taped on the carrier.

h.) Taping dimension

Leader	Cover-tape	The length of cover-tape in the leader is more than 400 mm including empty embossed area.
	Carrier-tape	After all products were packaged, must remain more than twenty pieces or 400 mm empty area, which should be sealed by cover-tape.
Terminal	Cover-tape	The tip of cover-tape shall be fixed temporary by paper tape and roll around the core of reel one round.
	Carrier-tape	The empty embossed area which are sealed by top cover-tape must remain more the 40 mm.

i.) Joint of tape

The carrier-tape and top cover-tape should not be jointed.

j.) Release strength of cover tape

It has to between 0.1N to 0.7N under following condition.

Pulling direction 165° to 180°

Speed 300mm/min.

Otherwise unless specified.

Other standards shall be based on JIS C 0806-1990.
